

Numbers and claims ledger

Rule: Carry the qualifier with the number. National crash counts, one-city behaviour samples, today's prototype measurements, and future design targets are different kinds of evidence. No hardware bill, cost-pie percentage, or crash-reduction estimate is established. [P14](#)

Number	Meaning and required qualifier	Source link	Slide
SIH26037; 30 Sep 2026	PS ID and idea-submission deadline	Official PS, P0	1
Six slides	Official maximum, including title	P0 template audit	Pack rule
4,80,583; 1,72,890	India road crashes and deaths in 2023 ; problem scale, not our impact	MoRTH, Road Accidents in India 2023	5
5,840; 2,161	Pothole-related crashes and deaths in 2023	MoRTH, P1	5; 5,840 optional
25,242; 9,432; 5.46%	Crashes, deaths and death share in combined wrong-side/lane-indiscipline category; never call it a wrong-way-only rate	MoRTH Table 3.1, P16	Optional
3,383; 919	Stray-cattle crashes and deaths in Haryana over the preceding five years , not all India	Haryana Assembly answer	5; deaths optional
50 lakh; 2019	India stray-cattle count in the livestock census; not road encounters	PIB livestock-census answer	5
722; 26%; 54.8%	Interactions, rolling crossings and group crossings at three Patna sites ; site sample only	Suman et al., Scientific Reports, 2026	5 optional
0.906 m	Observed mean squeeze-through gap in a filtered two-wheeler sample; not a safe-clearance rule	P16 source and qualifier, study	Optional
Five scenarios; two RoadRunner scenes	Literal PS counts. The RoadRunner count is not met by the proposed substitute	Official PS	4–6
Two CARLA scenes	Planned substitutes , village and junction; never label RoadRunner	P13, P14	4, 6
Five layers; 13 parts	Proposed architecture count, not built-function count	P15 , user design brief	2
14 models = five core + nine later	Design inventory ; two core models exist offline, joined AI stack is not running	User design brief; P2	3
8–16 moves; 2–3 s futures	Planned bounded candidate count and prediction horizon	P13, P15	3
90 difficulties; ten families; top 25	Catalogue built ; executable suite and passes are planned	P1	5
Two builders; ten weeks	Planning assumption from 1 Oct to early December; exact finale date unverified	P15, P0	4
10 Hz; 100 ms	Target replanning cadence/deadline, not achieved today	P15	4
735.8 ms/step; 88%	Current measured planner step; share spent in capsule-list checking	P2	4
348/348	Existing tests passing; they do not establish PS completion	P2	4
610 m; 382 m	Current S1 and sparse S3 completion distances in 2D demo	P2	4; 382 optional
Two of five	Current working demos, S1 and sparse S3; not five PS-scenario validations	P2, P14	4 optional
Zero render boxes	YOLOX output at its default threshold on audited renders; not zero objects present	P2	4

Number	Meaning and required qualifier	Source link	Slide
38.2%; 16.3%	Offline YOLOX AP for auto and cow respectively; neither is in-loop recall	P2	Q&A
2.089% vs ≤1%	Current yield model dangerous-error and its internal gate; output is disabled	P2	Q&A
165 GB; 4 h+; 8 GB; 400 GB	CARLA Windows source-build disk/time, lab GPU, and packaged-prop Docker-image cost in storage; not a cash estimate	CARLA Windows build , CARLA props	4; some optional
R2026a; CARLA 0.9.15	Pinned proposed MathWorks/SUMO and CARLA tool versions	P13 correction , MathWorks SUMO Client	2–4
299; 95%; <1%	Only 299 independent zero-failure runs from one specified distribution justify that one-sided confidence bound; not an Indian-road safety rate	P14 , P9–P12	Q&A only
~\$0.43–1.09 per GPU-hour	Cheapest verified on-demand cloud A100 rental range, Sep 2026; backup only	GetDeploying , Thunder Compute	4
96.0%; 86.3%	Offline DeepLab road-mask drivable IoU and mIoU on Indian images; not in-loop	P2	4

Claims ledger

SAY — evidenced today	SAY ONLY AS PLANNED	NEVER SAY
“Our MATLAB 2D demo completes S1 and sparse S3.”	“One Simulink ego stack will join sensing through vehicle motion.”	“The complete system already drives Indian roads.”
“Simulated lidar/radar tracking and offline YOLOX/DeepLab models exist.”	“A learned scorer will rank moves; an independent checker alone will permit motion.”	“ML drives the car” or “the verifier guarantees public-road safety.”
“The S1 route reached 610 m; 348/348 existing tests pass.”	“We will test all five PS scenarios, 25 priority probes and three PS metrics.”	“All five PS scenarios pass today.”
“The present loop takes 735.8 ms/step and S2/dense S3 stall.”	“10 Hz is a measured target , with a stale-plan brake.”	“Real-time today.”
“RoadRunner is unavailable under our licence.”	“Two detailed CARLA scenes will substitute for RoadRunner.”	“Two RoadRunner scenes” or “MathWorks approved the substitution.”
“ARAI and WMG already document Indian scenario work.”	“A reproducible Indian closed-loop benchmark may be a measured contribution after paired tests.”	“First Indian test suite” or “competitors have no safety checker” without evidence.
“Real Indian footage can test perception open loop.”	“Real-versus-render recall and a held-out gap will be reported.”	“Real-footage replay proves autonomous driving safety.”
“AI stack has a five-model target core and nine later candidates.”	“Additional models depend on data, time and measured value.”	“Fourteen AI models are built or run together today.”
